User guide: PlanetU team (vendor console)

Signing in

Choose Super Admin. No institute code is needed. Use your own owner login (made with npm run create-vendor), never the demo one on a real server.

Onboard a new client

1. Institutes, "Add institute".
2. Pick the type: school, college or university. This presets the modules and the words (Class or Course, Teacher or Faculty).
3. Enter the admin's name and email. They get a link to set their password.
4. Their dashboard shows the seven setup steps. Most institutes finish in under 30 minutes.

Watch setup progress

- Institutes shows a Setup bar for each client: how many of the seven steps are done and what is next.
- It also shows the day count and when the 30, 60 or 90-day check-in is due.
- Help the one furthest behind first.

Billing

Billing has plans, invoices and payments. Demo institutes are never billed.

Demo requests

People who fill in the form on the public page show under Demo requests. Call them back and choose "Mark contacted".
Requests booked through the help chat carry the label "From the chat".
Below them, "Messages from the help chat" lists people who asked for a person, a price or a contract. Reply and mark them.

The help chat on the public page

- It is an AI assistant that answers only from server/agents/playbooks/support-facts.txt. Keep that sheet true and short.
- It never gives prices. It hands over to a person when asked, for prices, contracts, refunds or personal data,
  and after two answers it could not give.
- It needs its own model key (PUBLIC_LLM_PROVIDER, PUBLIC_LLM_MODEL, PUBLIC_LLM_API_KEY) and has its own daily allowance
  (PUBLIC_DAILY_TOKENS). Without a key it says it is not connected, and booking a demo or leaving a message still works.

Configure or pause a client

Institutes, Configure: change modules or plan, reset the admin's password. Suspend stops sign-ins without deleting anything.
